

CLASSIC & PLATINUM WATER COOLERS

Chilled & Ambient Drinking Water Dispensers

Stream appliances are robust and reliable, ideally suited to the rigours and demands of residential, commercial or industrial applications.

Practical and simple to install

Stream Classic and Platinum appliances are available as “plumbed in” units requiring connection to mains electricity and a mains water supply.

Alternatively, refillable bottle versions can be acquired; these products only needing connection to mains electricity, whilst water is provided via refilling the bottle.

Both “plumbed in” and “Bottle” variants of the Platinum, are available as Bench-Top models.
